

Minimize Costs. Maximize Uptime.

- For Data Centers

*"Downtime isn't an option. **We need real-time visibility into our power use, so we can prevent failures before they happen, not scramble after the fact.**"*

Facilities Manager, Data Center

In a data center, power isn't just an expense, it's the lifeblood.

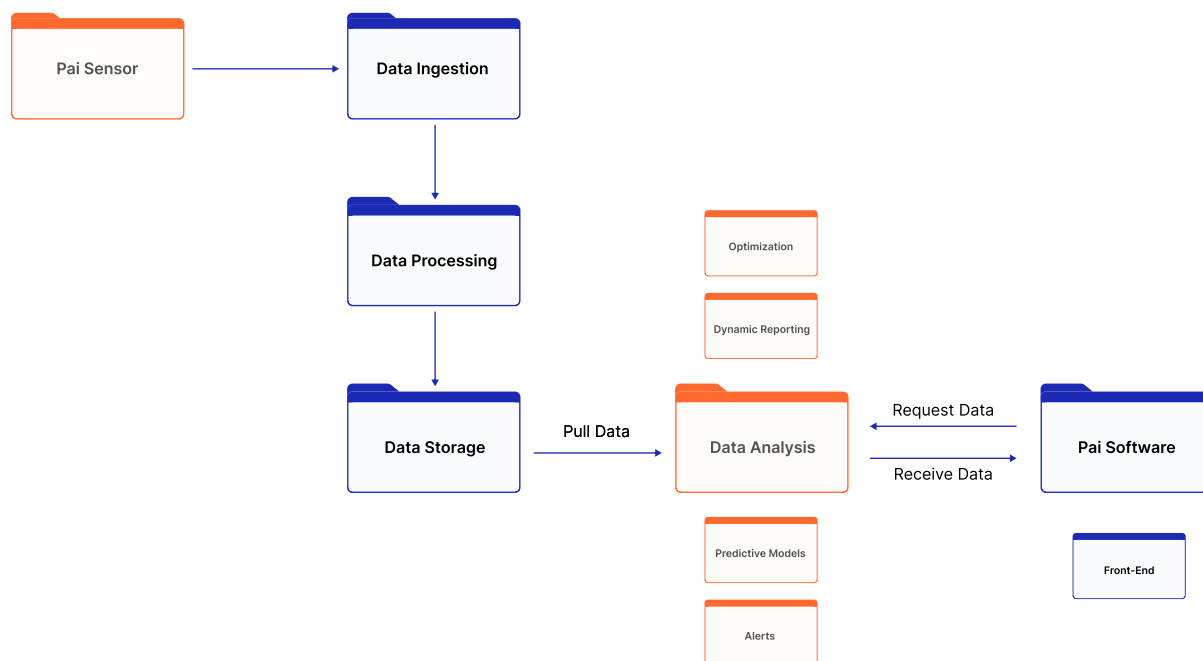

Every rack, cooling unit, and network switch depends on it, every second of every day. But with multiple facilities to run, balancing reliability, efficiency, and cost is no simple task. Fluctuating grid supply, backup systems that can't keep pace, and mounting fuel prices can turn small issues into costly downtime. And when the power drops, it's not just systems that go offline, rather it is reputations, commitments, and customer confidence.

How can Pai Help?

- ✓ Catch and prevent fuel (diesel, petrol, etc..) fraud before it impacts your bottom line.
- ✓ Spot energy issues before they cause losses.
- ✓ Easily see and manage all your power sources in one simple dashboard.
- ✓ Size your power systems just right to avoid waste and prevent outages.
- ✓ Get real-time, accurate energy data to manage power smarter.
- ✓ Automatically switch between different energy sources in real time to keep operations running smoothly and efficiently.

How it works

Pai is an **AI-powered energy management and control platform** that helps you spend less on operating your power supply sources while maintaining the maximum uptime needed to sustain and grow your operations. Using real-time and historical data, **Pai predicts power events to reduce costs (e.g outages, surges, anomalies), optimizes your power supply mix, and automatically switches between different power sources for uninterrupted operations**

Your Servers Deserve Certainty

Power is the backbone of uptime, and Pai gives you live visibility into every energy source, from the grid to renewables and backup systems, so you never guess and always act on facts.

Efficiency Without Compromise

Pai learns your data center's actual load patterns, helping you size systems that cut costs without gambling on downtime.

Smarter Than Static Dashboards

Instead of drowning you in endless numbers, Pai highlights the exact anomalies that put racks at risk. Focused insights, faster fixes.

When Power Shifts, You're First to Know

Voltage dips, source changes, or backup kicks in, your team gets notified instantly. Every millisecond protected.
