

Minimize Costs. Maximize Uptime.

- For Hospitals

*"In a hospital every second counts and **we can't afford to guess where energy is being lost. We need visibility in real time so we can prevent problems before they affect patient care**"*

Head of Operations, Private Hospital

Hospitals already have enough to focus on and keeping the power running shouldn't be another burden.

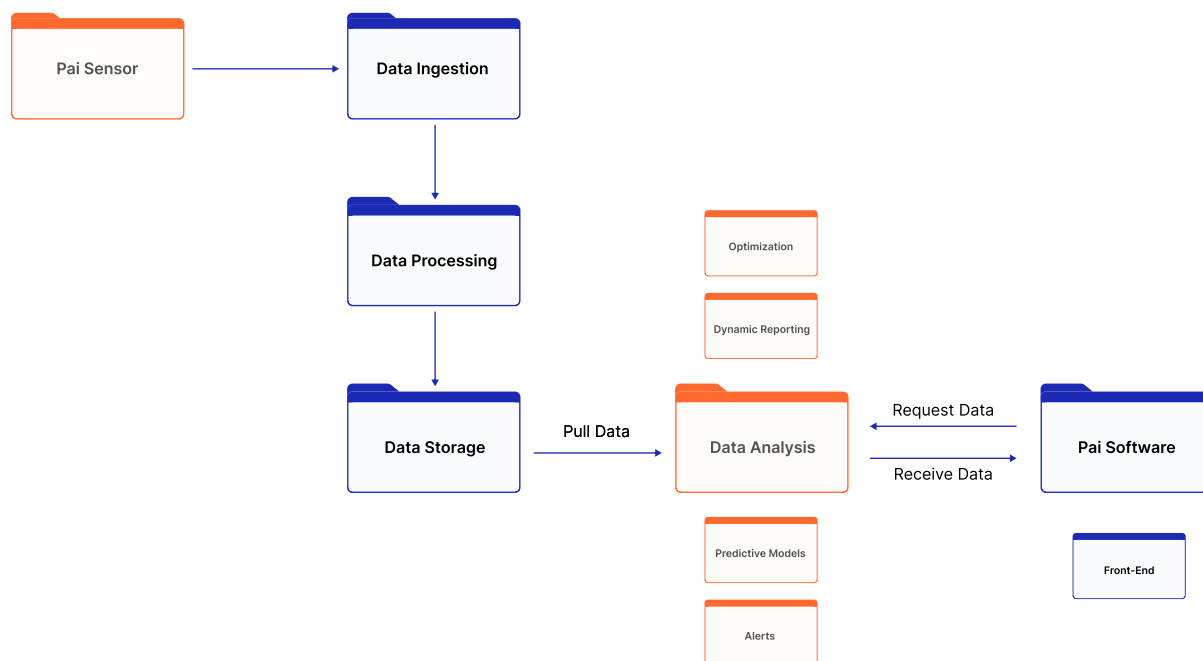

Unlike single-site facilities, they must manage energy across wards, ICUs, labs, and offices, each with critical demands. When electricity falters, backup systems fail, or fuel costs rise and the consequences reach far beyond the budget. They affect patient care, interrupt surgeries, and threaten life-saving equipment. Every outage isn't just an inconvenience, it's a risk to lives.

How can Pai Help?

- ✓ Catch and prevent fuel (diesel, petrol, etc..) fraud before it impacts your bottom line.
- ✓ Spot energy issues before they cause losses.
- ✓ Easily see and manage all your power sources in one simple dashboard.
- ✓ Size your power systems just right to avoid waste and prevent outages.
- ✓ Get real-time, accurate energy data to manage power smarter.
- ✓ Automatically switch between different energy sources in real time to keep operations running smoothly and efficiently.

How it works

Pai is an **AI-powered energy management and control platform** that helps you spend less on operating your power supply sources while maintaining the maximum uptime needed to sustain and grow your operations. Using real-time and historical data, **Pai predicts power events to reduce costs (e.g outages, surges, anomalies), optimizes your power supply mix, and automatically switches between different power sources for uninterrupted operations**

When Power Fails, Patients Wait. Or Worse.

Every beep, scan, and heartbeat monitor in your hospital depends on energy. Pai Enterprise gives you a clear, live view of where energy flows, leaks, or threatens to fail—before it costs lives or millions.

Stop Guessing. Pai is Watching.

Pai spots the weird stuff like ACs running when they shouldn't or machines working with no one there. Instead of flooding you with data, it just tells you what's off, so you can fix it fast.

Grid. Gen. Solar. Battery. You See It All.

Stay in control by tracking every source of energy your hospital relies on—whether it's the grid, renewables, or backup systems. See what's powering your wards in real time and switch seamlessly when needed."

The ICU Can't Wait. Neither Should You.

Get instant alerts when power changes, voltage drops, or backups activate. From the ICU to labs and surgery rooms, you stay informed and ready to act. Pai keeps every critical space protected.
